

## Safety Precautions for Chemical Storage in Your Community

### Dear Yas Acres Owners and Residents,

Greetings from Provis!

At Provis, we prioritize the safety and well-being of our community owners and residents. Many household care products commonly used in our homes, such as pool water stabilizers, air fresheners, cleaning, and agricultural care products, contain chemicals that can pose risks if not stored and used safely. Therefore, we would like to remind you of the importance of the safe storage and usage practices in your residential unit.

It is crucial to note that certain chemicals, such as ammonium sulfate, agricultural fertilizers, nitrate, and other industrial-grade fertilizers, are classified as irritants, oxidizers, and toxins. These chemicals can react to weather and other atmospheric elements, leading to unsafe environmental conditions.

To ensure the safety of all residents in our community, we urge you to carefully read the instructions on each product regarding storage and usage. We also recommend considering the following safety guidelines for proper chemical storage:

Read and follow every product's storage and mixing guidelines.

Keep irritants, oxidizers, and toxins, such as fertilizers, ammonium sulfate, and nitrate, in a shaded, cool, dry, and well-ventilated area.

Avoid mixing products such as bleach, vinegar, ammonia, rubbing alcohol, peroxides, and any other products.

Store pesticides in a lockable container away from other chemicals.

Store household products in janitor's closets or proper storage rooms, away from minors' reach.

Familiarize yourself with the basic classification of chemicals based on the pictograms indicated on the package.

We appreciate your cooperation in keeping your community a safer place. Should you have any questions or inquiries, please do not hesitate to call or send a WhatsApp text message to our Customer Care Center at 600505056 or send an email to: [yasacrescm@provis.ae](mailto:yasacrescm@provis.ae)
